

Science Collaborative

September 21st, 2011

Core Intended User Meeting

Agenda

9:00-9:30 am

- Introductions
- Review of June 21st notes
- Project Updates – Jeff, Steve, Angie, Kenny

9:30-10:30 am

- CIU Highlight: Rick Thompson, DNR
- Discussion
- Feedback, questions, other?

June 21st CIU mtg

CIU Highlight: Bryan Hawkins

- Sediment transport along Spit and the challenges of maintaining the Homer Harbor

UNH Progress Report on all SC Projects

- Feedback from group supports that this project tracking fairly well
- Power of data vs. Human Dimensions: the dichotomy between science and local knowledge and those who have to make a decision between opposing or differing interpretations of the data

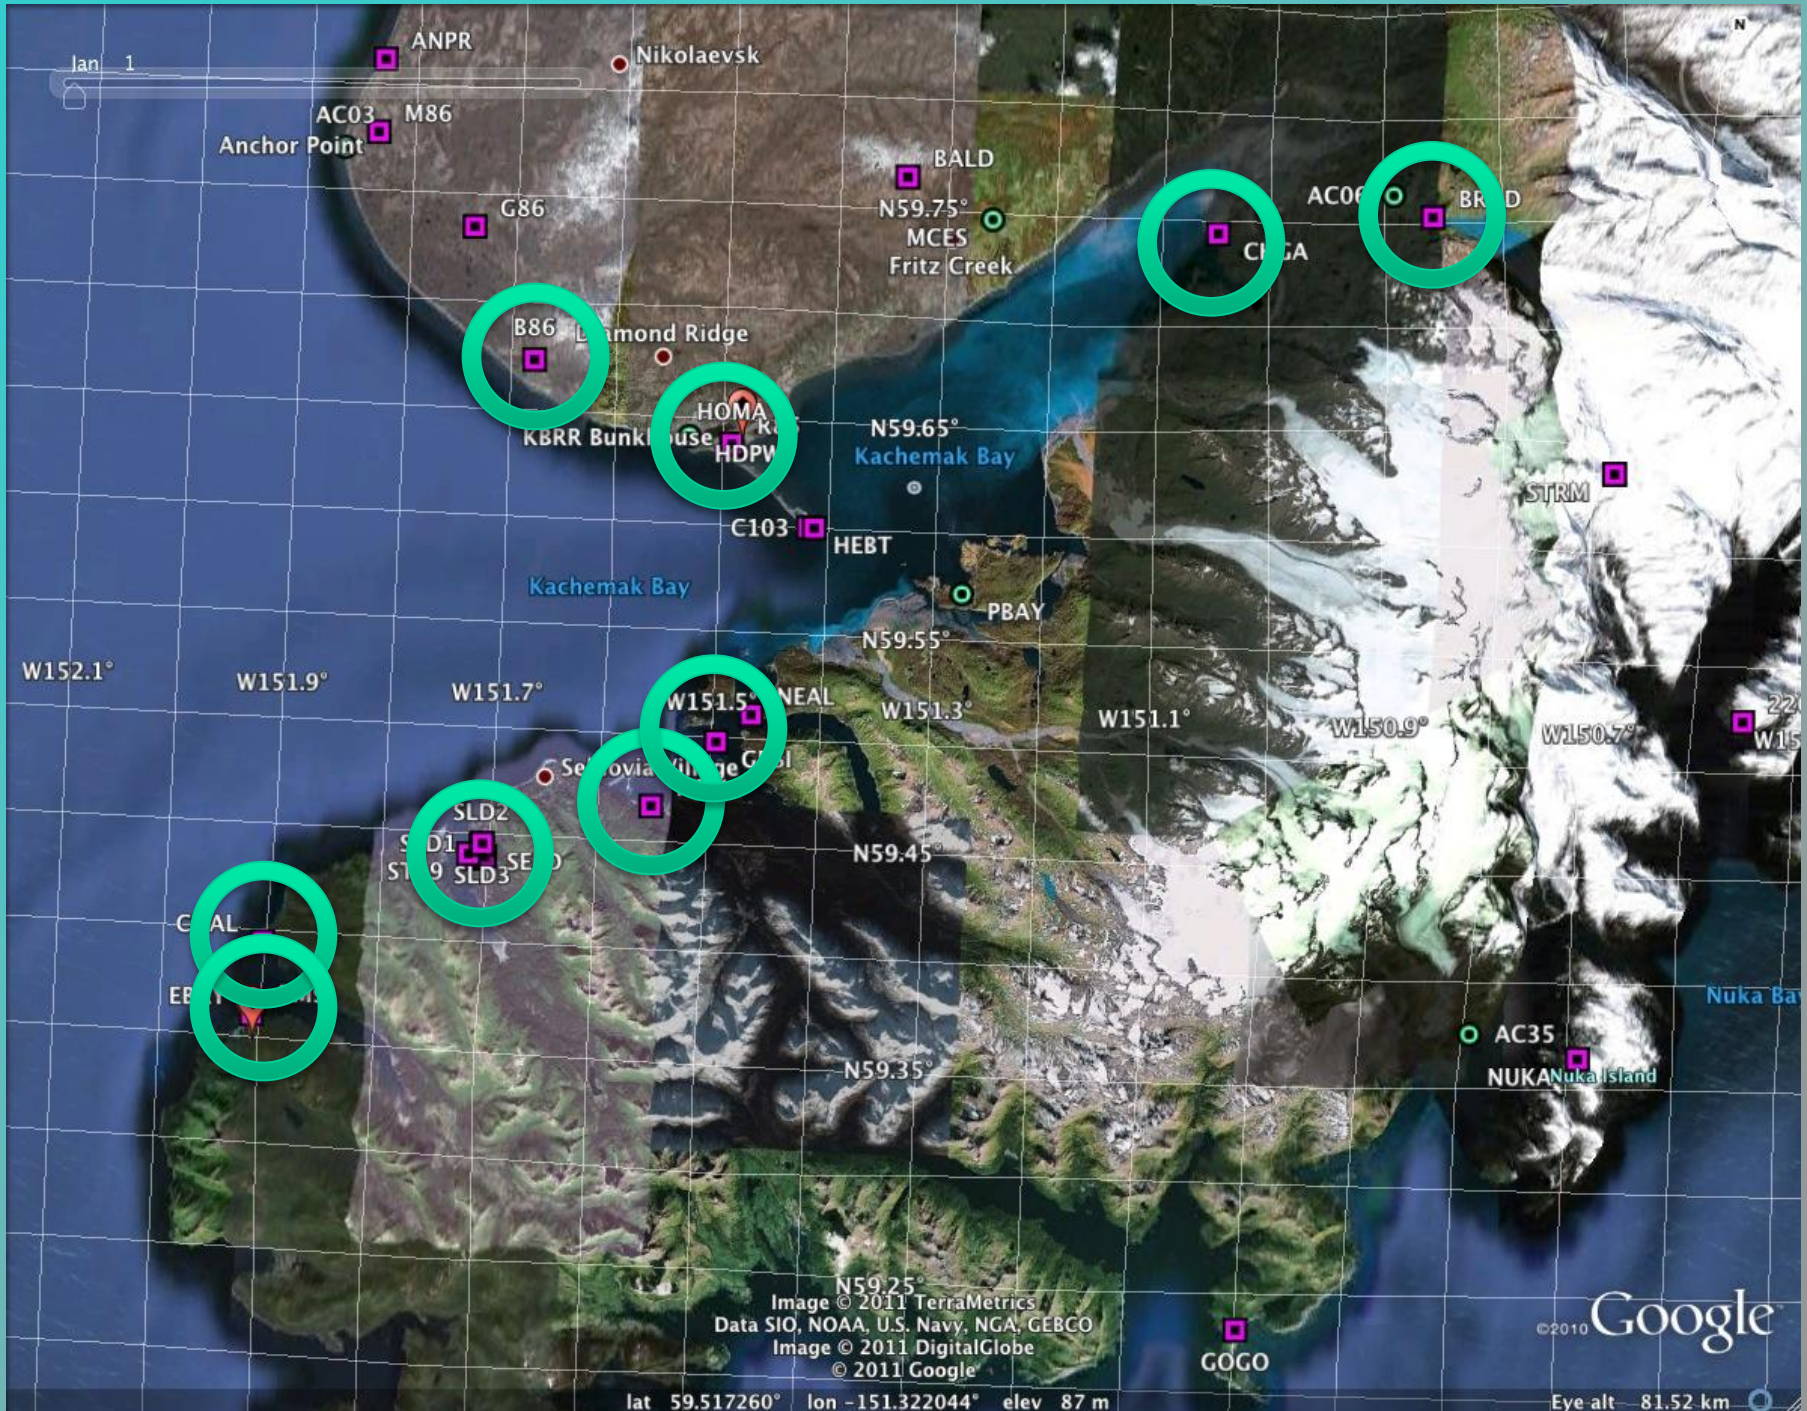

Summer 2011 Measurements

Summer 2011 Measurements

Initial Results

- Preliminary solutions for Sep. 2011 surveys are done
- Uplift rates look nearly uniform across the Bay
 - Probably vary by no more than 20-30%
- Mean uplift rate for pre-existing sites is close to 0.4 inch/year (10 mm/yr)
- Some new sites installed and surveyed: COAL, KASI, Chugachik, more from KBRR surveys

- **Vertically-stable benchmarks**

- 5 new- 4 still to be done
- Collected GPS data on those and others

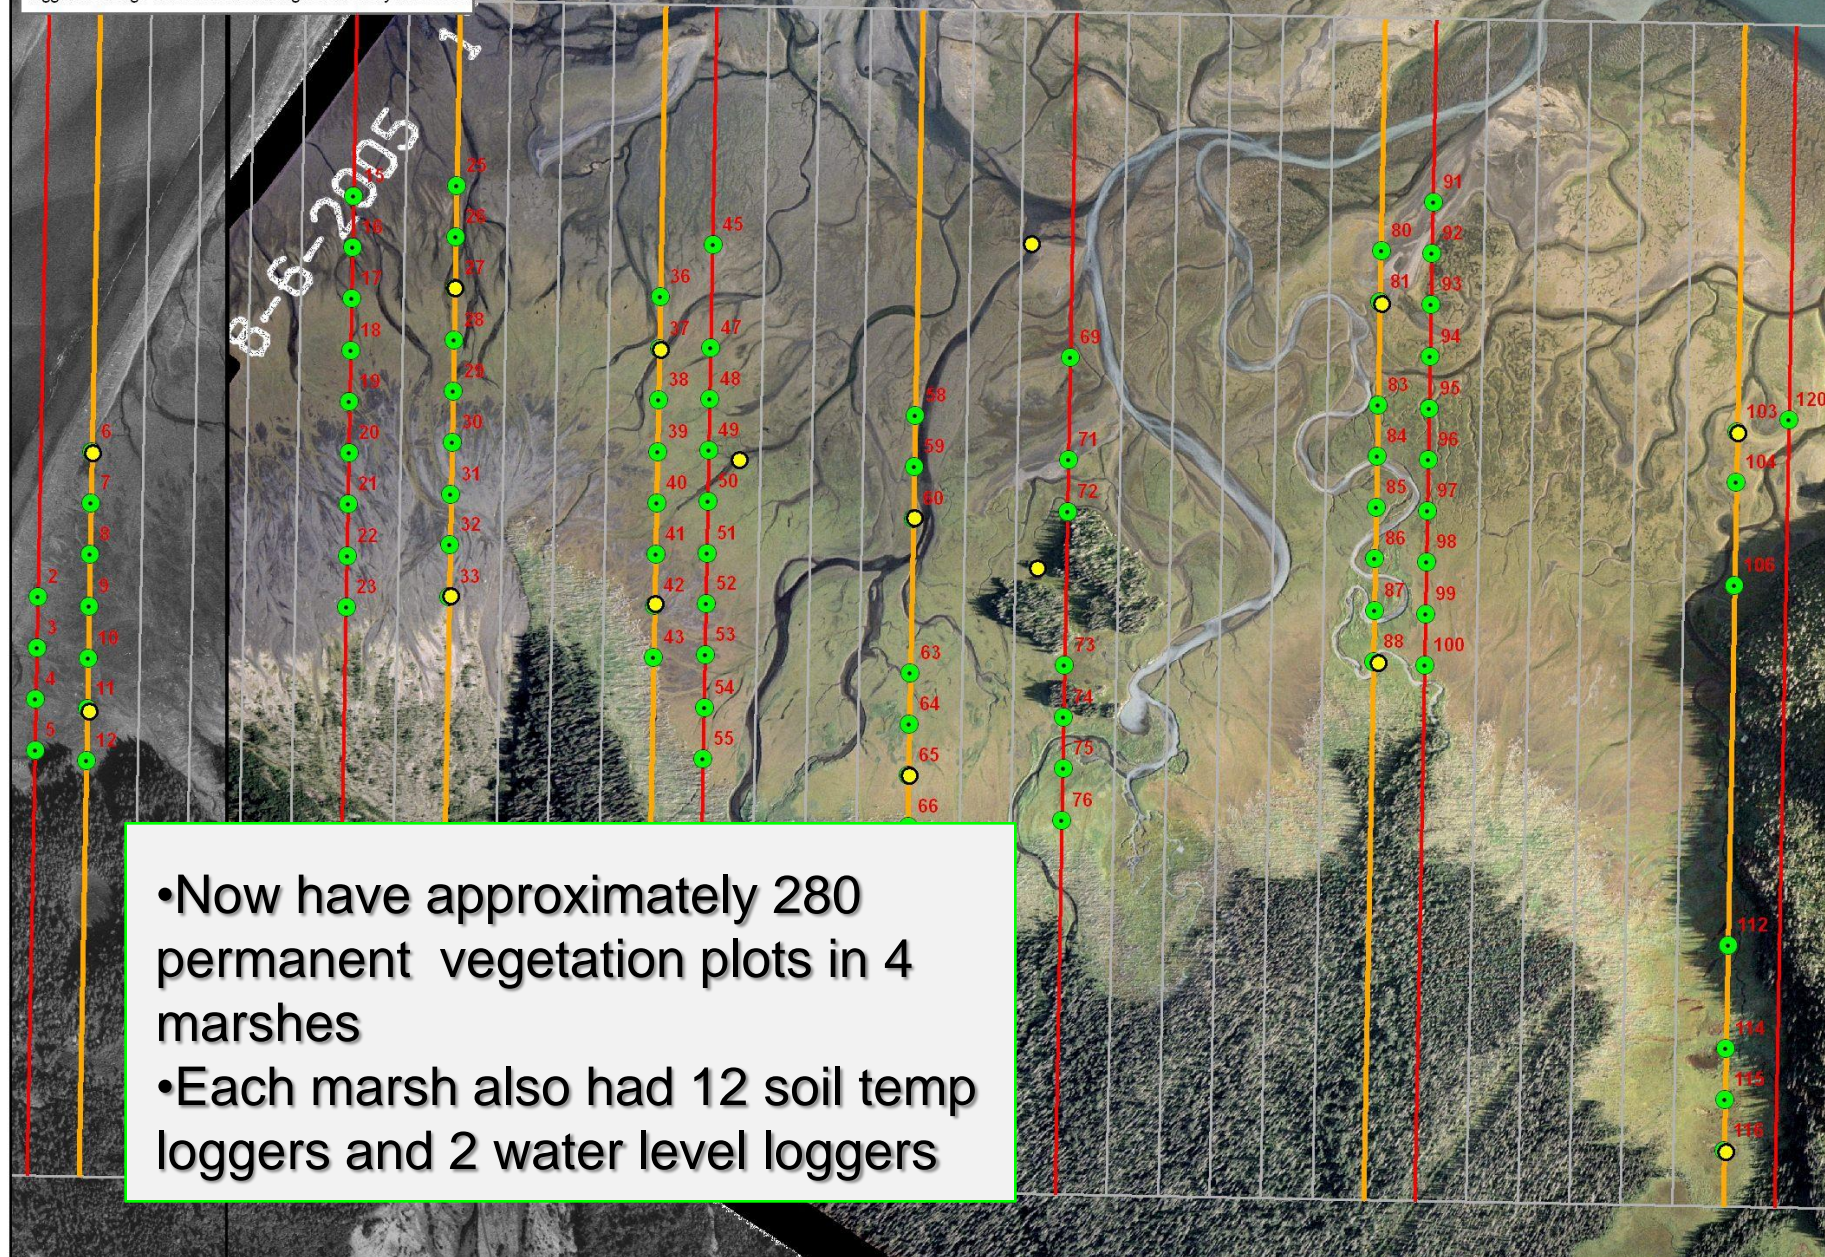

China Poot

0 500 1,000 2,000 Feet

Large green points are plots, small yellow points are loggers. Orange transects are biological diversity transects.

- Now have approximately 280 permanent vegetation plots in 4 marshes
- Each marsh also had 12 soil temp loggers and 2 water level loggers

- Vegetation monitoring

- Collected data on all 280 plots
- Half of those now have two years

What Does Biological Diversity Have To Do With All Of This?

- Fresh Water: influence on surface circulation patterns
- The Alaska Marine Highway: plankton and larval transport systems
- Glacial Inputs to Salt Marshes: sediment, nutrients, temperature, and the contribution to the local ecology

National Estuarine Research Reserve System

**Kachemak Bay
Research Reserve**

Large Scale Modeling of Sea Surface Temperatures over Time. This model was developed by Yi Chao, JPL

Citizen Science as a Tool for Assessing Biological Diversity (n=18)

- Training on Methods
- Data Used for:
 - Refining vegetation maps
 - Documenting biological diversity

Sites & Sampling

Each Site

- 144 additional vegetation plots
- 12 Insect Fallout Traps
- 12 Insect Sweeps
- 12 Samples for Infaunal Invertebrates
- Fish Sampling (tidal & fresh water)
- Bird and Mammal Species Lists

Next Steps...

- Data entry and processing
- Review and update Citizen Science training and communications
- Planning for next Fall ~ Fox River Flats and Sadie Cove sites

Beluga Slough Vegetation (8/13/2011)

Alaskan Orache	Nootka Alkaligrass	Sandsperry
Beach Pea	Oysterleaf	Seaside Arrowgrass
Bluegrass	Pacific Silverweed	Seaside Ragwort
Common Yarrow	Pringle's bluegrass	Seaside Sandplant
Creeping Alkaligrass	Pursh Seepweed	Western Touch-Me-Not
Dandelion	Ramensk's Sedge	Gmelin's Saltbush (Orache)
Disc Mayweed	Red Fescue	Goose Tongue
Dunegrass	Rough Bentgrass	Horsetail
Glasswort	Saltmarsh Starwort	Lynbye's Sedge
Mare's Tail	Marsh Willowherb	

Community Monitors

- Engaging Homer community
- Compile richer biological data
- Provide validity to usefulness of the gained knowledge

“Citizen Science in Our Salt Marshes” Discover Lab

- Tool to provide an overview of the Science Collaborative project as well as to recruit future community monitors
- 320 Visitors over the three sessions

Salt marsh monitoring training sessions

- Plant identification
- Community composition (percent coverage)
- Insect surveys
- Infaunal core use
- Animal Observations

Monitoring outings

– Beluga Slough & China Poot

Continued citizen scientist engagement

- Follow-up/appreciation packet including preliminary data report and links to further project information
- Sadie Cove and Fox River outings Summer '12

National Estuarine Research Reserve System

**Kachemak Bay
Research Reserve**

Keypad Polling

What is your favorite leisure time activity?

1. Reading
2. Fishing/Hunting
3. Boating/Kayaking
4. Gardening
5. Spelunking
6. Other

Number of Years in Your Current Position

1. Less than three
2. 3-5
3. 5-10
4. 10-15
5. 15-20
6. Too many to count

Number of Years You Have Done This Type of Work?

1. Less than three
2. 3-5
3. 5-10
4. 10-15
5. 15-20
6. Too many to count

Participating in this meeting was a good use of my time

1. Strongly Agree
2. Agree
3. Neutral
4. Disagree
5. Strongly Disagree

Did you learn something that you will apply in your work or future decisions?

1. Yes
2. No
3. Maybe
4. Prefer not to answer
